

Restoration Of The Maxillary Central Incisors

Dr. Julian Caplan, UK

One of the biggest challenges for a dentist is the restoration of the central incisors. The main obstacle is to succeed in meeting the patients' aesthetic expectations in this the most challenging aesthetic zone in dentistry. Whether it is one or two maxillary central incisor the function, form, texture, value, chroma and hue all have to be correct. Dr. Caplan will review these factors as well as how the Cerec technology allows the dentist to not only overcome these hurdles but how these cases inspire the dentist to become a true dental artist.

Included in this presentation will be:

- Overview of color basics
- Understanding tooth morphology and characterization
- Cad/Cam replication and copying techniques
