

## **Prosthetic Considerations for an Aesthetic Rehabilitation: a Confluence of Science and Art**

**Dr. Shobha J. Rodrigues, India**

### **Purpose**

The goal of a good treatment plan must be to permit a long term prognosis, not just in terms of esthetics, but also with respect to biology and functional aspects. The purpose of this poster is to present a case wherein due prosthodontic consideration is given to obtain an esthetic restoration.

### **Methodology**

This case have been executed to obtain optimal tooth form and contour on basis of facial, dentolabial, phonetic and tooth analysis and giving due prosthetic considerations

### **Results& conclusions**

There are some basic universally recognized principles that govern our ideas about what is considered attractive. Advances in technology and biomaterials have expanded the possibilities for aesthetic optimization in restorative dentistry. Prosthetic considerations and applications must be given to formulate an optimal treatment plan based on individual clinical situation of the patient.
