CURRENT CONCEPTS IN AESTHETIC SITE DEVELOPMENT

(09:00 – 12:00)

Dr. Edgard EL CHAAR

In the past 25 years, the focus in dentistry has changed gradually from being in repair business to a very sophisticated comprehensive treatment and more focused on aesthetics. As we know, aesthetics relates psychologically to a patient’s perception of beauty. Knowing the parameters of aesthetics by a surgeon is crucial in providing the restorative dentist an adequate result to build on particularly for dental implants in the anterior. The latter requires different philosophy in treatment planning that combines esthetics, function, well being and psychological demand tailored for each patient individually.
